

NMAT Performance Evidence for CHED Cut-Off Policy Review

This dashboard presents descriptive evidence from NMAT_Exodus.parquet (178,927 examinee records, 2006-2018) to inform the CMO amendment on NMAT cut-off scores. All analyses use validated data from the 4-pipeline processing system. PLE-linked analyses use the observable cohort (Year ≤ 2014) to avoid right-censoring bias.

National Profile B4+ vs B5+ Thresholds PLE-Passer Linkage Institution and Foreign Context Key Evidence for Policy Review Data, Methods, and Limitations

Historical NMAT-to-PLE-Passer Linkage by Score Bin

What this shows: the proportion of NMAT examinees in each score bin who were later confirmed as PLE passers, using the observable cohort (Year ≤ 2014). This is an NMAT-to-PLE-passer linkage measure and is not comparable to an official PLE pass rate.

The dataset identifies NMAT examinees who were later matched to PLE passer records. It does not contain all PLE takers or PLE failures. Therefore, these values represent NMAT-to-PLE-passer linkage, not PLE passing rates. The observable cohort permits a historical comparison of later confirmed PLE-passer linkage across NMAT score bands.

NMAT-to-PLE-Passer Linkage Rate by Percentile Band

Score Bin	Range	N (observable cohort)	Confirmed PLE Passers	Linkage Rate (%)
B1	0-9	6104	505	
B2	10-19	5254	830	
B3	20-29	5228	997	
B4	30-39	5741	1312	
B5	40-49	6229	2882	
B6	50-59	5831	2992	
B7	60-69	5942	3359	
B8	70-79	6355	3819	
B9	80-89	6854	4595	
B10	90-100	9657	7352	

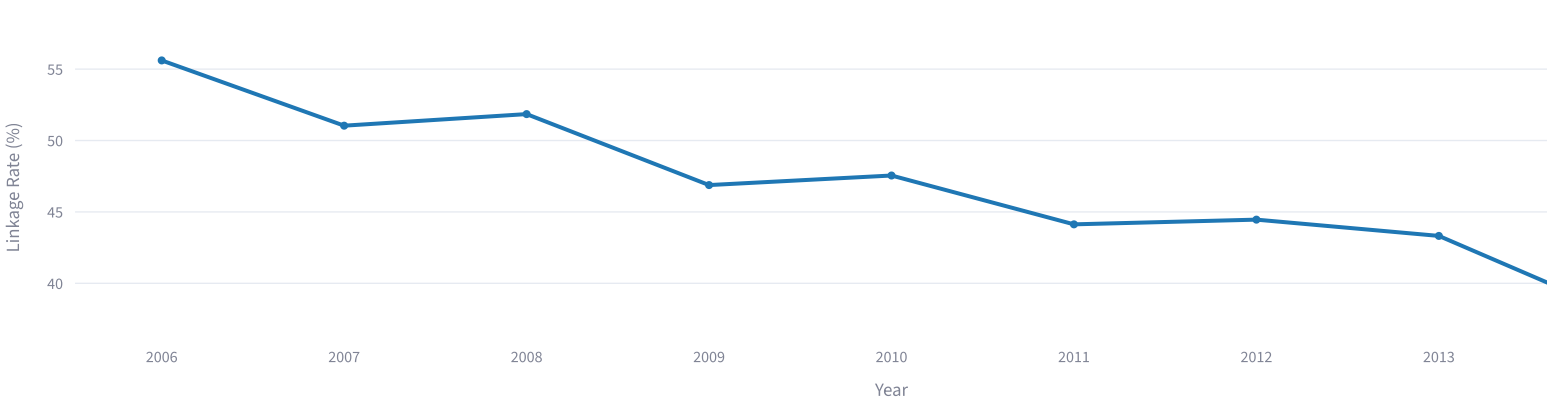

The B4 bin (Bin 4) shows a linkage rate of 22.9%, compared to 46.3% for B5 (Bin 5). These are historical descriptive patterns, not causal predictions.

Score Profile by PLE Status

	TotalRawScoreTRUE					NMS_PER_num					PartIRawScoreTRUE				
	count	median	mean	<lambda_0>	<lambda_1>	count	median	mean	<lambda_0>	<lambda_1>	count	median	mean	<lambda_0>	<lambda_1>
No confirmed PLE match	35194	112	115.01	94	134	35075	36	40.28	15	63	35194	61	61.31	51	72
Confirmed PLE passer	29269	143	144.76	125	164	28646	73	68.64	52	90	29269	76	75.75	66	86

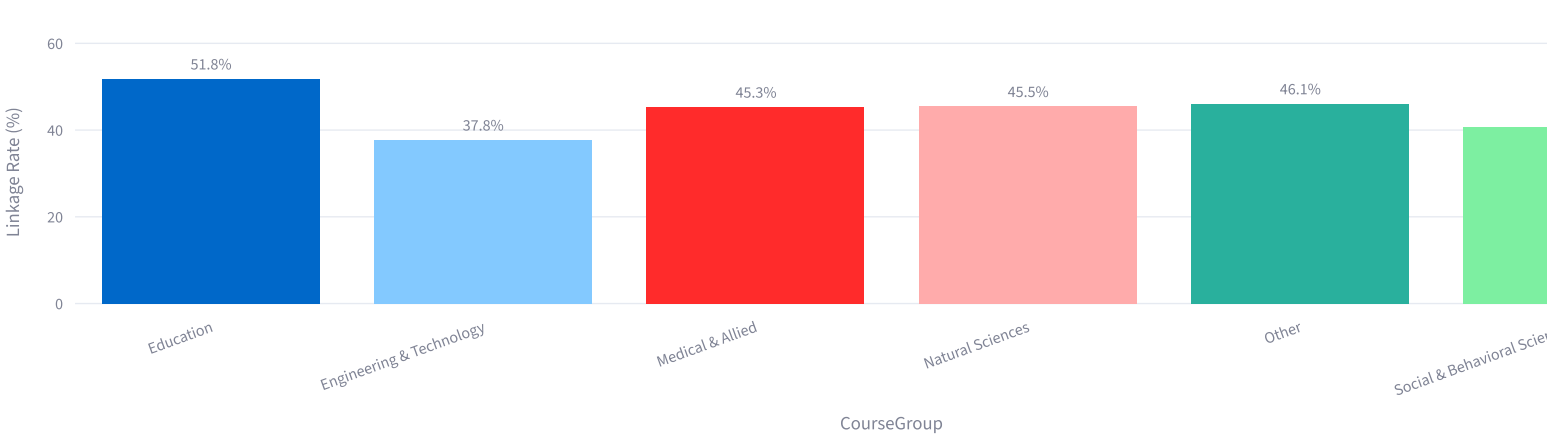

PLE-Passer Linkage by NMAT Year

NMAT-to-PLE-Passer Linkage Rate by NMAT Year (Observable Cohort)

PLE-Passer Linkage by Course Group

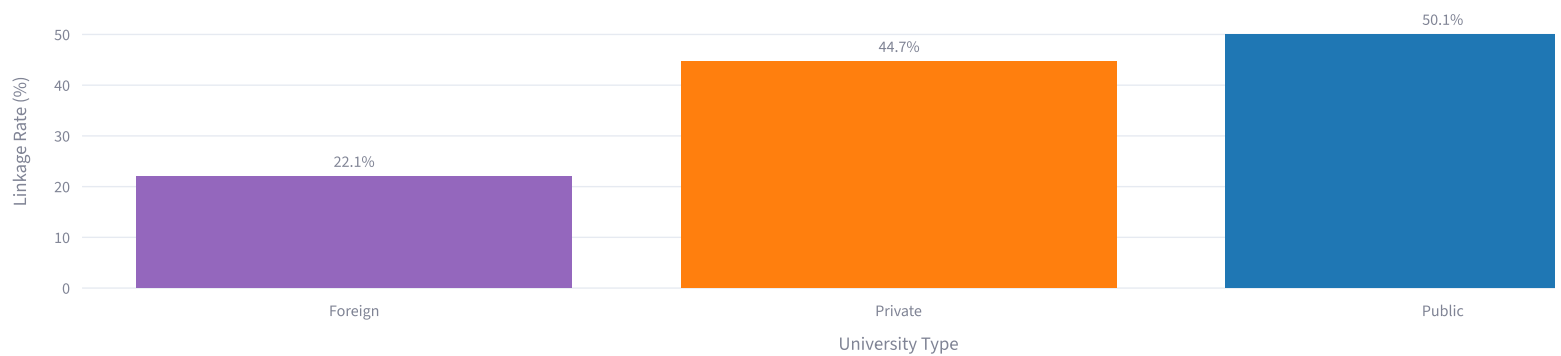

NMAT-to-PLE-Passer Linkage Rate by Course Group

CourseGroup	N	Confirmed	Median %ile	Linkage Rate (%)
Education	2973	1541	52	
Engineering & Technology	302	114	71	
Medical & Allied	35433	16061	49	
Natural Sciences	15219	6921	66	
Other	6189	2853	55	
Social & Behavioral Sciences	4385	1783	64	

PLE-Passer Linkage by University Type

NMAT-to-PLE-Passer Linkage Rate by University Type

University Type	N	Confirmed	Median %ile	Linkage Rate (%)
Foreign	1124	248	58	
Private	48991	21909	51	
Public	13555	6786	68	

The observed difference in linkage rates between institution types reflects the set of NMAT examinees who were later matched to PLE passer records. The data does not identify the reasons for these differences.

Stress-Test: Defensible PLE Matching Subset

This section repeats the PLE-passer linkage analysis using only the most defensible matching criteria: single best-record per person, clean deterministic match, at least 5 years between NMAT and PLE passage, and Filipino nationals only. This subset addresses concerns about PLE matching quality.

The PLE matching process uses deterministic linking via NMAT application numbers. While the DE-FUZZY refactor removed all fuzzy matching for full auditability, the match depends on the application number being recorded consistently across the NMAT and PLE datasets. The subset below uses the strictest criteria to validate that the broader findings are robust to matching quality concerns.

Clean subset (all bins) ?

27,151

B5+ in clean subset ?

23,357

Share of observable cohort ?

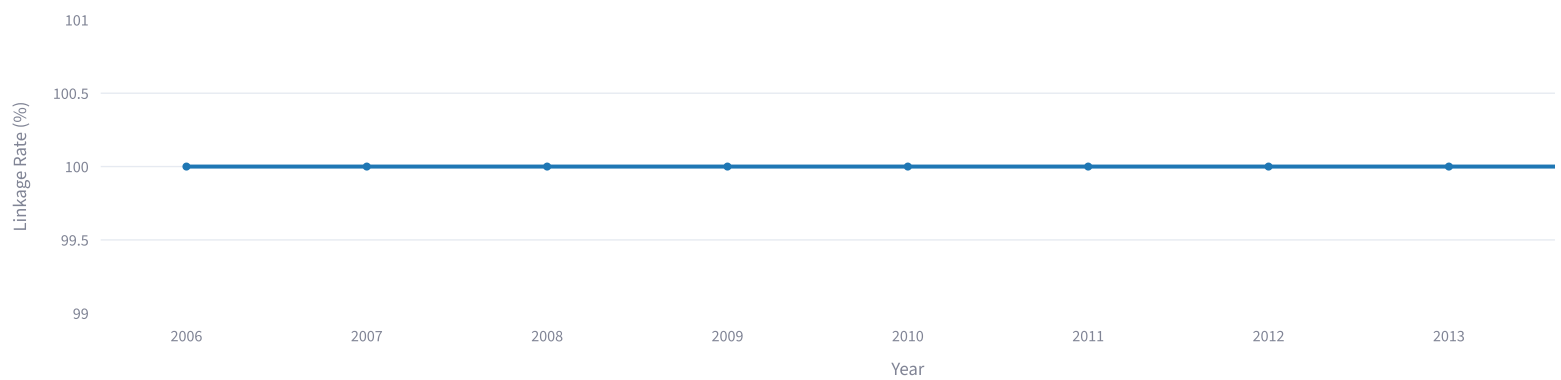

36.2%

Median PLE year gap ?

6 yrs

Yearly PLE-Passer Linkage (Clean Subset, B5+)

NMAT-to-PLE-Passer Linkage Rate (Clean B5+ Subset)

B5+ Clean Subset by University Type

University Type	N	Share (%)
Foreign	172	
Not Specified	275	
Private	17180	
Public	5730	

The clean subset yields 23,357 B5+ PLE-matched passers, representing 36.2% of the observable cohort. The distribution by university type mirrors the full analysis, confirming the broader findings are robust to matching quality concerns.
