

NMAT Performance Evidence for CHED Cut-Off Policy Review

This dashboard presents descriptive evidence from NMAT_Exodus.parquet (178,927 examinee records, 2006-2018) to inform the CMO amendment on NMAT cut-off scores. All analyses use validated data from the 4-pipeline processing system. PLE-linked analyses use the observable cohort (Year ≤ 2014) to avoid right-censoring bias.

National Profile B4+ vs B5+ Thresholds PLE-Passer Linkage Institution and Foreign Context Key Evidence for Policy Review Data, Methods, and Limitations

University Type and Institution Context

What this shows: how NMAT performance varies across Public, Private, and Foreign institution types. These classifications refer to the examinee's recorded undergraduate institution, not necessarily the medical school they applied to or attended.

Score Summary by University Type

University Type	N (best record)	Median %ile	Q25 %ile	Q75 %ile	Median Raw Score	Median Raw Score
Foreign	1894	51	20	79	124	124
Private	102888	48	21	74	120	120
Public	27627	56	26	83	127	127

Foreign Examinee Context

The available data identify NMAT examinees by citizenship. These are NMAT examinees, not enrolled medical students. The CMO includes provisions for foreign students, but enrollment numbers would require separate data from HEIs.
