

NMAT Performance Evidence for CHED Cut-Off Policy Review

This dashboard presents descriptive evidence from NMAT_Exodus.parquet (178,927 examinee records, 2006-2018) to inform the CMO amendment on NMAT cut-off scores. All analyses use validated data from the 4-pipeline processing system. PLE-linked analyses use the observable cohort (Year $\leq$ 2014) to avoid right-censoring bias.

National Profile B4+ vs B5+ Thresholds PLE-Passer Linkage Institution and Foreign Context Key Evidence for Policy Review

Data Context and Methodological Notes

This section documents the dataset, processing decisions, and limitations relevant to interpreting the evidence presented.

Dataset Overview

- **Source file:** [NMAT_Exodus.parquet](#) (54 columns, 178,927 rows)
- **Examination years:** 2006-2018
- **Unique examinees (best record):** 133,558
- **Observable PLE cohort (Year $\leq$ 2014):** 64,501
- **Repeat takers:** 33,713 unique persons (25%)

Key Methodological Choices

- > TRUE Raw Score Recalculation
- > Best-Record Deduplication
- > Observable Cohort Definition (Year $\leq$ 2014)
- > Deterministic PLE Matching
- > Data Integrity Summary

Limitations Relevant to CHED Decision-Making

PLE Outcomes

The dataset only identifies NMAT examinees later matched to PLE passer records. It does not contain all PLE takers or PLE failures. Therefore, this dashboard reports NMAT-to-PLE-passer linkage rates, not PLE pass rates. Official PLE passing rates published by the PRC should be used for benchmarking purposes.

GIDA and IP Status

The dataset does not contain indicators for Geographically Isolated and Disadvantaged Area (GIDA) residence or Indigenous Peoples (IP) membership. The CMO exception for 30th-39th percentile applicants from these groups requires documentation not available in this dataset.

Medical School Admissions and Enrollment

This dataset records NMAT examinees, not enrolled medical students. The number of examinees at or above a threshold represents the available applicant pool, not actual enrollment. HEI-level admissions decisions, capacity constraints, and selection criteria are not captured.

Foreign Student Enrollment Cap

The CMO caps foreign student enrollment at 10 slots per incoming class at SUCs. The dataset shows NMAT examinees by citizenship, not enrolled foreign students. A descriptive foreign-examinee profile is provided, but this dashboard does not assess compliance with the 10-slot cap.

Composite Ranking for Foreign Applicants

The CMO encourages composite ranking for foreign applicants. The dataset does not contain GWA, interview scores, or other admission criteria needed for such analysis.

PHEI Accountability and Sanctions

The CMO ties cut-off privileges to PLE performance and provides for revocation after three consecutive years below benchmark. This dashboard does not assign compliance labels or risk ratings to individual HEIs. The NMAT-linked PLE data is not a complete measure of institutional PLE performance, as it only captures NMAT examinees who later passed the PLE.
